

TEACHER QUICK CARD

Before you prompt

GREEN	AMBER	RED
Public / synthetic / non-personal inputs; low-stakes drafting; teacher verifies.	Internal materials, parent/staff communication, assessment support, connected apps, uncertain approval. Stop and check policy/data scope.	Named/sensitive student information, safeguarding, health/SEN, passwords, unpublished high-stakes tests, emotion inference or consequential AI decisions.

Five questions

1. Is this tool/account approved for this purpose?
2. Am I including a real person or sensitive/confidential data?
3. Does ChatGPT need that information?
4. Could this output materially affect a learner?
5. How will I verify it independently?

No real student, parent, colleague, safeguarding, SEN, health, grade or unpublished assessment data in a personal/unapproved account.

SCOPE-V

Situation - Goal/class context, without personal data.

Constraints - Age/level/time/curriculum/format/boundaries.

Output - Exactly what you want produced.

Persona - A useful role, not fake authority.

Examples - Show the desired standard/style where useful.

Verification - Require checks, uncertainty and sources where appropriate.

Teacher QA before use

- Factual / mathematical / scientific accuracy
- Curriculum fit and intended learning
- Reading load and accessibility
- Bias and stereotypes
- Answer key / worked solution correctness
- Source and copyright needs
- Whether the task still measures what you intend

Data controls are not approval

On a personal account, review Data Controls and Memory settings. These affect model improvement/personalisation; they do not create a lawful basis, replace a DPIA/processing agreement or override school policy. Temporary Chat can reduce persistence/personalisation for suitable low-risk work, but it is not a school-approval switch.
